LIGHTING
INNOVATORS

Welcome to **Inox Technical Lighting**

Since 2003, Inox has applied many years of combined experience to the provision of technically advanced, well considered and beautiful lighting solutions.

Inox insists on providing quality products only, backed up by skilful design and attentive after-sales service. Our experienced lighting designers work with industry standard design tools such as AutoCAD, Dialux and AGI32 to provide beautiful and practical designs. We have a commitment to providing practical solutions that are simple to install and maintain, and are backed up with credible manufacturer warranties.

Long-established relationships with leading international manufacturers give us access to a huge palette of products, enabling us to create innovative lighting solutions for all types of projects.

Within this catalogue, we present an overview of some of our favourite products from these suppliers.

We continue to research the market for groundbreaking products to give our clients' projects that little bit extra. Please contact us for the latest product and technical information.

A wide range of versions

Compact, versatile and easily hidden, LED tape has emerged as a great lighting tool over the past several years. Inox sources only high-quality tapes from reliable suppliers.

We have a vast range of tape types: single colour, RGB, RGBW, colour-toning and warm-dimming. All with high colour rendering and long service life.

Profiles come in surface, recessed, trimless recessed, special trimless and suspended versions.

Most tapes are stocked in the UK. We offer a quick customisation service and can deliver tapes made to size with feed cables fitted and tested in the workshop.

Eco - cost effective for indirect, 60 LEDs/m

Standard - 120 LEDs/m

Linear - 280 LEDs/m

SURFACE, RECESSED OR TRIMLESS EXTRUSION OPTIONS

MONORAIL2
(SHOWN WITH OPTIONAL SPOT)
3W, 97MM / 4W, 145MM / 8W, 288MM

Monorail 2 offers great flexibility over unusually long distances

- Surface, recessed, trimless recessed and suspended profiles
- Magnetic fixing system
- Spot-free illumination
- Tunable white option
- Touch-dimming option to spotlights

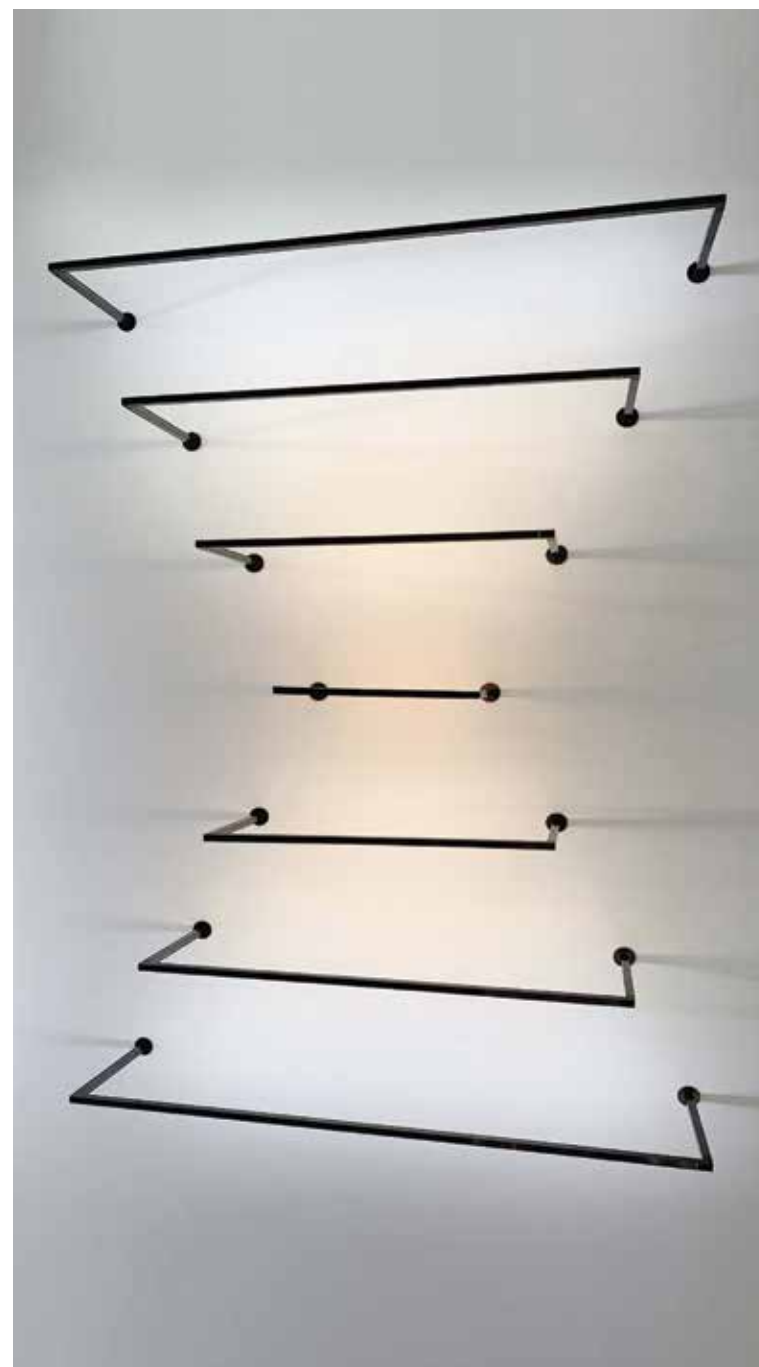

Monorail 2 adds surface, recessed, trimless and suspended profile options to the Monorail family.

With a maximum loading of 180W and its modular nature, Monorail allows for very long runs from the feed in point.

Cool/warm tunable white dimming is now available as an option and Monorail Spot modules are available with touch-dimming sensors.

Vertical and horizontal illuminated corners allow for completely seamless installations.

Profiles in black or white.

MICROFILE MINI TRACK 48V

Extremely compact track system

- Surface, recessed and trimless versions
- Shallow and deep profiles
- 24V or 48V DC system
- DALI dimming
- 24V systems also dimmable by 1-10V

Micro track is a highly versatile compact track system running on 24V or 48V DC power.

Individually addressable DALI or 1-10V dimming options. Tracks may also be configured with two non-dimming circuits.

Linear modules and projectors in various styles, available in black or white.

Range of outputs and light colours.

Professional standard projectors with RA>90, range of optics and accessories, individually DALI addressable for versatile control.

Suitable for use in shops, galleries, museums, restaurants and homes.

10W SIDE BEND NANO FLEX

FLXIBLE NEON LENS 3D

FLXIBLE NEON 2

FLXible Neon

- Flexible LED system with dot-free appearance
- Front, side, dual bend and 360° emitting versions
- Indoor and outdoor use
- Now in two sizes
-Standard 8-10mm and Narrow 4-6mm
- New optic versions with spot, medium, flood and oval beam

Available in fixed colours 2200K, 2400K, 2700K, 3000K, 3500K and 4000K, and Tuneable White 2200K-4000K, and RGB.

Standard width 10W/M up to 832lm/M, IP67. Narrow width 7.2W/M, up to 670lm/M. IP65.

FLXible Neon comes in 5M reels and may be cut to fit on site.

FLXIBLE NEON 360

Aluminium profiles

At Inox, we pride ourselves on having 'a profile for every application'.

With an extensive range of recessed, surface, suspended direct or direct/indirect housings; louvre/diffuser materials and finishes, we can achieve exactly what the client is looking for.

All systems are available with a choice of dimming systems - including wireless Casambi dimming and a range of colour temperatures, standard or high outputs and integrated emergency lighting.

Recessed

- Wide range of profiles for easy installation
- Opal, prismatic and low-glare diffuser options
- 70% efficient

Recessed profiles come in a range of styles; trimmed, trimless and open slot - plus options of lightsources, finishes and controls.

Suspended direct/indirect

- Create bright, airy spaces
- Flexible switching of direct/indirect and accent elements
- Output up to 4700lm/m up and down

Indirect lighting opens up a space providing a bright, airy ambiance. Lit ceilings reduce contrast and glare in offices, allowing ceiling features to be displayed to their best effect.

Direct/indirect systems are an efficient way to provide these benefits, as the direct element provides the required level of task lighting where needed.

Downlights and projectors may be added for accent lighting. Multi-circuit wiring allows for different elements to be controlled individually by switching or dimming.

Direct/indirect profiles are available in a range of styles and finishes.

Surface / Suspended

- All profiles can be cut to suit a space
- Custom corners to follow corridors and enhance architectural detail
- Combine with spotlights and/or downlights for point of sale
- Available in a range of finishes

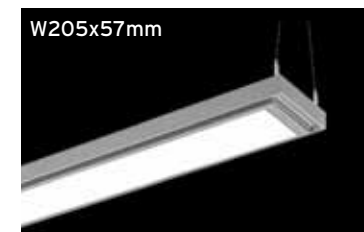

Surface and suspended direct systems offer superb design flexibility. Custom profiles can be manufactured to fit any space. Illuminated corners and curves allow profiles to follow the sweep and flow of a space. For applications such as galleries and point of sale displays, direct downlights and directional projectors may be added. Standard finishes include copper, gold, marble and various stone effects, in addition to black, white and grey.

Surface & suspended shapes

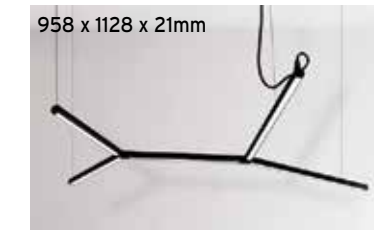

- Get creative with your space
- Follow sweep and flow of building architecture
- No longer tied to the form of obsolete fluorescent lamps, exciting possibilities open up for the designer

Step beyond our standard range of linear profiles with these feature luminaires in a variety of shapes, sizes and colours for ceiling, wall and pendant mounting.

The ability to create curved extrusions in various lengths and radii presents new possibilities for bespoke lighting installations.

Shape creation system

- Compact and versatile
- Be creative in three dimensions

Versatile extruded profile that enables infinite shapes. The linear LED lightsource, screened by a flexible silicone diffuser, creates seamless lighting effects. Integrated projectors and orientable miniature spotlights enhance the versatility of the system. Standard wall, ceiling and freestanding luminaires complete the family.

Simple and elegant continuous lighting

- Great flexibility
- Choice of outputs
- Direct, indirect and direct/indirect options
- Easy to install
- Unlimited system lengths

Whilst most of our surface and suspended profiles are available in wall-mounted versions, these simple and elegant profiles are designed specifically to provide seamless continuous wall-mounted lighting.

A broad range of styles, sizes, finishes and outputs is offered. Systems can be made to any length and some include internal and external corners, allowing the feature to frame a room or follow the flow of a corridor. All are simple to install and represent excellent value.

Production & event lighting in miniature

- Remarkably compact size
- Precision spots, pinspots, gobo and framing projectors
- DMX control
- Dedicated smartphone app
- IP65 rated - suitable for indoor and outdoor use

Gantom and Precision are families of miniature precision projectors ideal for use in theatrical productions, live events, exhibitions and attractions, as well as detailed architectural lighting.

The range includes gobo projectors, framing projectors, DMX-controlled colour changing projectors and pinspots, with up to seven primary colours. Operating on 12V or 24V DC, they may also be battery powered when no mains power is available.

The devil is in the detail

- Aluminium and/or plasterboard systems
- Ideal for highlighting detail and architecture

Our micro profile systems represent the ultimate in integration of lighting into the fabric of a building.

Aluminium profiles include formed shadow gaps, inside corners, outside corners and straight runs for ceilings, walls and floors.

Our unique 'Cartoon Light' system integrates the profiles directly into plasterboard to ensure a clean finish without filling around the housing.

Recessed downlights

- **High performance LED downlights for all applications**

Inox offers a vast range of recessed downlights in trimmed and trimless styles, including round, square and multiple configurations, low glare, fixed and orientable. All feature excellent light quality and offer choices of output, beam width, light colour and rendering with the proven LED benefits of low energy use, reduced maintenance and long service life.

Plaster-in and trimless downlights

- **Seamless integration**
- **Clean detailing**
- **Unobtrusive lighting**

Complementary to, and offering the same benefits as our high quality downlights, these plaster-in and trimless versions offer discrete, seamless integration with reliable, easy installation and decorative finishing.

High power downlights

- Outputs up to 6,800lm
- Efficacies up to 179 lm/W

High output downlights for display lighting, high ceilings and inaccessible areas, in a range of styles including trimmed and trimless, round and rectangular, fixed and orientable. All offer choices of output, beam width, light colour and rendering with the common LED benefits of low energy use, reduced maintenance and long service life.

12/24V hub systems for indoors & outdoors

- Versatile 'Hub & Swag' lighting systems
- Safe extra low voltage and LED systems
- Large range of pendant styles in glass, ceramic and plated metal

The Radiale hub is an extra low voltage system based around a central element containing a safety isolated low voltage transformer. From this 'hub', various plait-like cables, which power and support the lighting bodies, may be spread in any direction. A wide range of compact pendants in glass, ceramic and metal may be used in any combination.

The 'Universo' LED Radiale systems allow new forms of luminaire to be produced with the benefit of running at a lower wattage, allowing more lamps per transformer and extending LED life.

The Universo Outdoor system creates new possibilities for garden and landscape lighting.

SEDO BENE 20

Ground surface

Low-level exterior lighting provides low-key orientation lighting for parks and gardens. By pooling light around luminaires, interesting scenarios playing on light and shadow may be created. Many low-level luminaires have full cutoff, dark sky-friendly optics and are particularly suitable for environments where light pollution is a concern.
